

Seamless, Integrated, and Patient-Centered Data Exchange

NextGen Healthcare has been delivering on better patient data exchange for years—and we're committed to carrying it forward into the future.

As a domestic and worldwide leader in healthcare data exchange and optimization, we're naturally averse to siloed data and the unwanted consequences it can have on better patient outcomes. Our fully automated interoperability infrastructure aligns with a nationwide shift toward seamless, patient-centered data exchange that strengthens interoperability and expands success to personalized health tools.

As CMS, ONC, and TEFCA initiatives evolve, NextGen Healthcare remains actively engaged, ensuring our clients stay ahead of regulatory requirements while delivering on the promise of connected, coordinated care.

60K+ connections to clinics, hospitals, and other care settings

NextGen Healthcare was a founding member of the Carequality Network nearly 10 years ago. The Carequality Network connects 60K+ clinics, hospitals, and other care settings nationally. Through Carequality, NextGen Healthcare exchanges more than 1B documents annually.

Supported by Carequality, NextGen® Share plugs you into a national data exchange and provider network to see a holistic view of the patient. Streamlined patient information exchange enables you to integrate and move data across systems and locations.

By the numbers

- **300M+ secure direct messages** sent/received in the last 10 years
- **4M+ directory addresses** in NextGen® Share
- **~1B queries** for patient records annually
- **221M patient records** in our RLS

“One of the great things about Direct Messaging and NextGen Share is that it does not matter who the hospital or medical group is, what operating system they're using, or what EHR or EMR they're using—Direct Messaging comes standard.”

Patrick Christian, Database Administrator
OrthoTennessee

With proven interoperability at scale, NextGen Healthcare is proud to power 1/3 of all public Health Information Exchanges through Mirth® Connect by NextGen Healthcare. With more than five million downloads worldwide and operations spanning over 30 countries, Mirth Connect has become one of the most widely deployed integration engines in the sector. Thousands of active servers process countless healthcare transactions daily, facilitating everything from routine lab results to complex multi-system data exchanges.

Mirth Connect enables secure, real-time data sharing across disparate systems, driving care coordination, efficiency, and clinical outcomes.

Leading the way in standards-based integration:

- Enterprise-grade API for EHR and Practice Management reads/writes across 800+ integration routes
- Built-in Patient Access API (FHIR-enabled, mobile-accessible)
- SMART on FHIR support for embedded clinical apps
- Automated patient data query and retrieval from external EHRs
- Supporting the exchange (inclusive of import and export) of 340M clinical documents annually

“The channels and features within Mirth Connect allow you to build integrations quickly. If I’m asked on Monday to integrate a new system into the hospital network, it will be installed and ready for testing in a week.”
