

Providers Guide to NextGen Clinical AI

How to use NextGen® Clinical AI

- 1 Launch the Mobile application.
- 2 Select a patient's name from your schedule or search for the patient's name.
- 3 Select "Today's Visit."
- 4 Launch Ambient.
- 5 Proceed to have a natural conversation with your patient. Remember, the more you speak out loud, the more the AI scribe will capture for your documentation.
- 6 Review your documentation.
- 7 Change or add documentation, utilizing suggested diagnosis codes, medications, and lab/imaging orders to accelerate documentation.
- 8 Send to EHR.

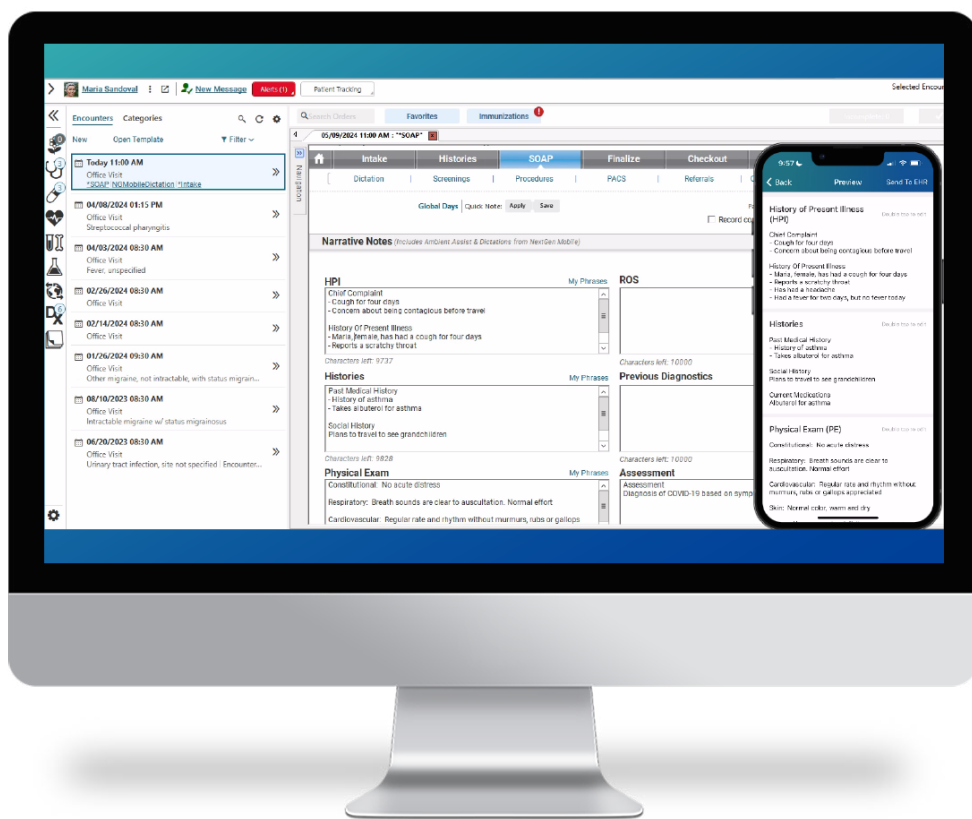

"I used to have a massive stack of notes that had to get done. I find Ambient Assist [NextGen Clinical AI] is slightly more accurate than I am. Now I'm seeing 5 more patients a day... and out by 5pm."

*Keith M. Nord, MD, Orthopedic Hand Surgeon
Sports Orthopedics & Spine*

Features & Benefits

- Ambient listening technology works with natural, conversational speaking styles in English or Spanish
- 100% technology-based and does not require the use of additional personnel
- Fully automated note-taking and chart integration, no additional copying and pasting required
- SOAP note is typically generated in 20 to 30 seconds after the patient visit
- Saves providers up to 2 ½ hours of documentation time per day
- Audio and transcripts are never stored or saved to ensure privacy and security
- Provides relevant suggestions for ICD-10s, medications, lab/imaging orders, and diagnosis codes
- Powerful macros launch physician documentation favorites with simple phrases or words
- Eases burnout and reduces cognitive load by eliminating the need to recall encounter details hours later

Direct to the EHR

This narrative documentation lands in the NextGen® Mobile Dictation Template. Once you generate your master document, the narrative documentation will combine with anything else documented for the final note. Your practice can configure the documentation to land into the SOAP note.

Tips & Tricks

Think out loud

- “I think you have a sinus infection, but it is most likely viral.”
- “You sprained your ankle, and we will get an x-ray but I do not think it is broken. In the meantime, I want you to get an AirCast from the drug store and wear it whenever you are awake.”
- “You are doing a great job managing your diabetes, under the goal A1c of 7.0, but your blood pressure is higher than we like, over 140 for the top number.”
- “We will get some routine labs: a blood count, CMP, lipid panel, and PSA today. I want you to go for a low dose CT scan to screen for lung cancer and I recommend a colonoscopy even though you haven’t wanted to do one in the past. I’ll see you again in six months.”

Verifying one relevant positive or negative finding at a time

- **Good example:** Do/did you have a fever? Yes or No
- **Bad example:** Do/did you have fever, vomiting, pain? Yes or No
