

# Achieve Work-Life Balance

NextGen® Mobile Solutions

## Just when you get settled—it happens

You sit down for dinner or get comfortable at your kid's soccer game—when suddenly your phone rings. A patient is in urgent need and wants to talk.

The need to have your laptop always nearby is burdensome. Engaging in the complex VPN login process disrupts your free time as well. By the time you get your computer ready for the encounter and connect to a data source, at least five minutes of your precious time has been wasted.

## A simpler approach

It's crucial to quickly and securely access patient data when on the go. With NextGen Mobile Solutions, you can easily pull up and review a patient's chart on one single screen on your smartphone. It's all there at your fingertips—from previous histories and medications to any documents you may need to view. You can also prescribe medications from your smartphone. After some simple actions over a few minutes on your smartphone, you can get back to your life.

## Features

### Document on the go

Documenting encounters while on the go is possible with Tap Templates. This feature works in real time with the NextGen Mobile application. These templates enable you to pull up a quick phone note and either use your voice or keyboard to record the reason for the call. You can mark that it was after hours and make any other comments.

### Help while in the office

NextGen Mobile Solutions can help you manage your days in the office. Through the mobile hub, you can access your PAQ items, tasking, medication refills, and previous dictations. It's all queued up for you to check off. This can help you better manage your ad hoc items, which tend to pile up throughout the day.

### Before the encounter

As you get ready for your next appointment, you can go into a patient's chart and review diagnoses, previously known allergies, and other documents from your smartphone before seeing the patient.

The laptop can stay in the office since everything needed for the encounter is on your smartphone. Patients will find this a refreshing change as you engage with them without constantly looking at a computer screen.

### After the encounter

Burdens of documenting on a desktop may be alleviated when you use your phone to dictate an encounter while you're either in the room with the patient, back in your office, or in the hallway.

Another feature, Dynamic Tags, allows you to add a diagnosis on mobile or the EHR desktop. If it's added to an encounter, it creates separate HPI, Plan, and/or Assessment tags so that you can dictate specifically on those diagnosis HPI plans.

### Speech-to-text accuracy

Enhanced speech-to-text accuracy with support for real-time macros performs similar to a traditional transcriptionist or scribe. You tap on the tags you want to dictate on, and the words appear in real time for you to edit on the mobile device and send them back into the EHR. Dictations get back to the EHR desktop within seconds so that you can use the mobile and the desktop in tandem.

# Benefits

By streamlining clinical documentation and collaboration, NextGen Mobile Solutions can be an essential, integrated extension to your EHR solution. Be more productive, and at the same time, ensure a better work-life balance.

## No more pulling out your laptop

From your smartphone:

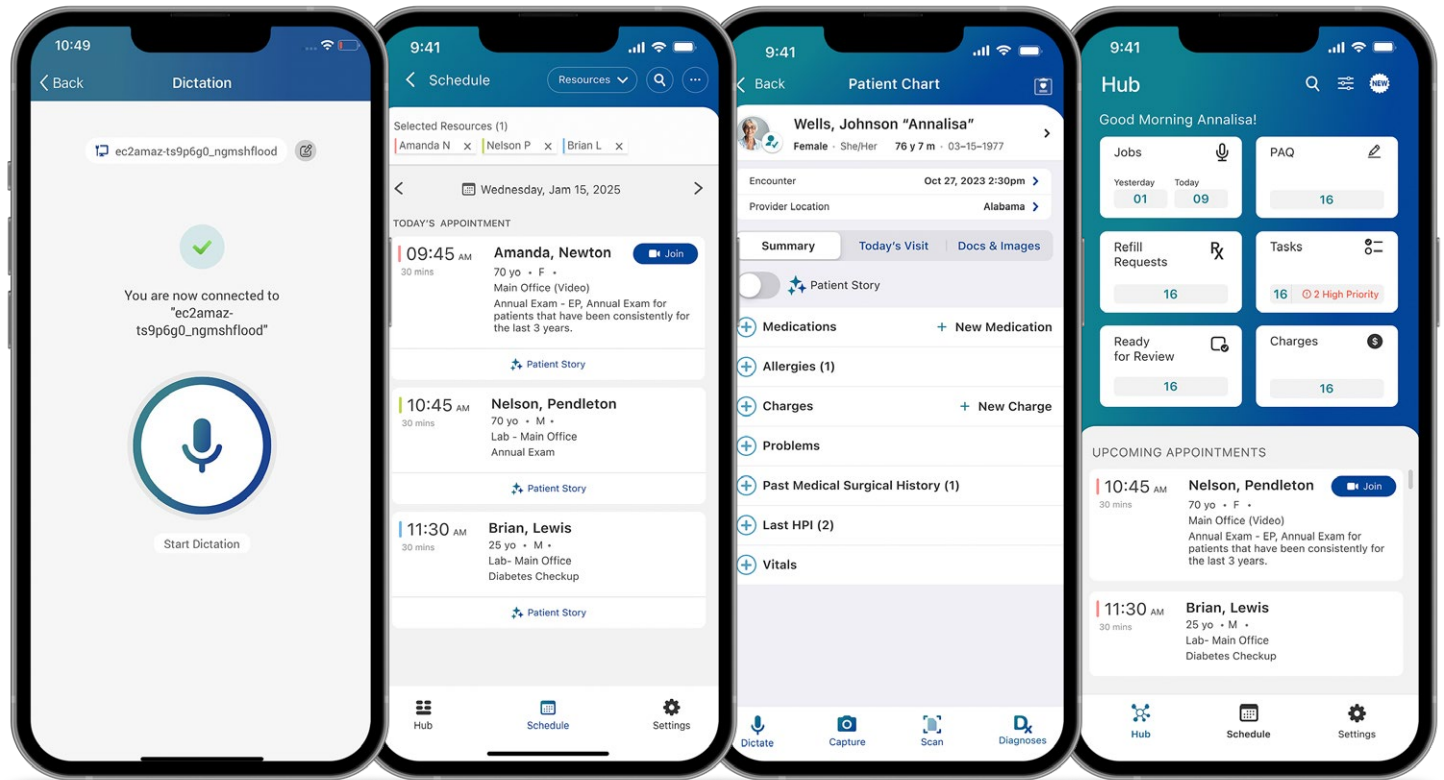

Handle requests when out of the office—access clinical data, add medications, dictate notes, engage with clinical staff, and more.

Manage your daily ad hoc items quickly—when it's convenient in or outside the office.

Leverage your voice—interact face-to-face with your patients without the distraction of a computer screen and meet documentation needs quickly.

“The system is very user-friendly, and there’s not some steep learning curve. When I’m home, or at the hospital, it syncs my charts with the system through the internet.”
