

Increase Available Data Storage Space and Reduce Costs

NextGen Storage Optimization powered by Ellkay

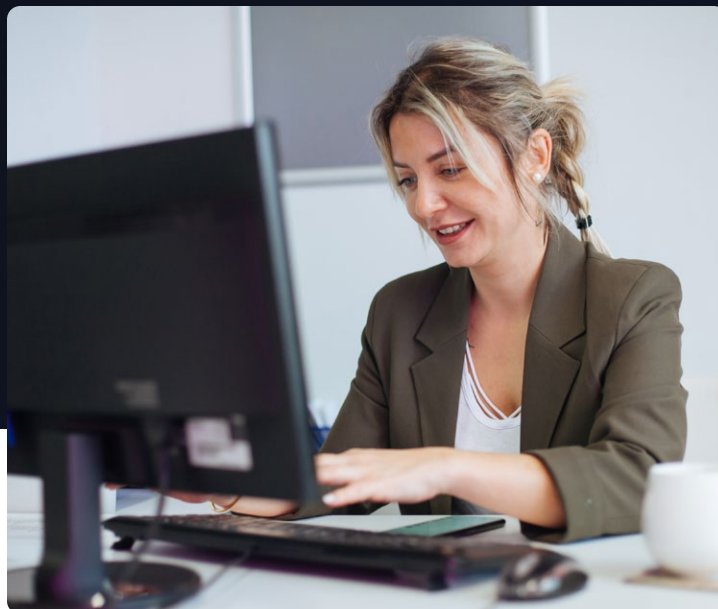

NextGen Storage Optimization helps you better manage your data lifecycle, reduce database size, and lower storage costs by purging data based on your retention policy—while giving you the flexibility to keep or discard purged data if desired.

NextGen Storage Optimization is built to:

- **Lower storage costs**
Purge unnecessary data and reduce storage consumption.
- **Reduce risk & stay compliant**
Retain data only as long as necessary to meet compliance.
- **Improve performance**
Smaller databases lead to faster systems and a better user experience.
- **Operate efficiently**
Automate data lifecycle management and focus on what matters most.

Whether you're hosted on the cloud, or storing data in-house, this solution offers a resolution to data storage overage fees—making data more affordable.

*Currently, a single historical cut-off date is applied for all patients regardless of age**

Data removal is based on logical data groupings of module data starting at a client-set historical date.

Removal of data can occur from these areas:

Practice Management (PM)

- Alerts
- Appointments
- Notes

Clinical

- Patient allergies (only allergies resolved prior to the cutoff date)
- Patient diagnosis (only diagnosis' resolved prior to the cutoff date)
- Patient medications (meds not marked as ineffective)
- Patient problems (only problems resolved prior to the cutoff date)
- Patient procedures
- Patient vitals

Document Management (ICS)

- Documents
- Images

EHR Documents and Images

- Patient documents
- Patient images
- Patient reports

The Result: Right-sized databases, lower costs, reduced risk, and a scalable data lifecycle strategy.

NextGen Healthcare provides two powerful solutions that help you manage data lifecycles, reduce database sizes, and lower storage costs by purging data based on your retention policy—while giving you the flexibility to keep or discard purged data if desired.

 NextGen Storage Optimization <i>formerly known as Clear Lite</i>	 NextGen Storage Optimization as a Service <i>formerly known as CLEAR</i>
What is it? A service solution that allows you to define retention policies and easily purge to optimize storage.	What is it? A fully managed service where we handle retention, purging, and data management—delivering optimized storage with minimal lift.
How it works  Define Retention Policy Set rules for how long data should be kept. Purge Data Automatically remove data that exceeds retention rules. Reduce Database Size Lower database size and storage costs. Discard Purged Data Purge data is permanently deleted.	How it works  Define Retention Policy We work with you to establish retention requirements. Purge Data We apply policies and purge data securely and consistently. Reduce Database Size We continuously optimize your storage and control costs. Keep or Discard Purged Data We store purged data if desired or securely discard it if not.
Data Removal - One-time data removal - Clinical LKOasis not included - Data removal is explicitly date-based - DB Shrink can be performed as a part of the project or as a separate project for an additional cost	Data Removal - One-time data removal - Clinical LKOasis not included - Data removal is explicitly date-based - DB Shrink can be performed as a part of the project or as a separate project for an additional cost
