

From One Practice to Another

NextGen® Enterprise 8.4 & NextGen® Orthopedics Suite 2.0 in Practice

Megan Hook, IT Director at Barbour Orthopedics & Spine, explains how recent NextGen Healthcare upgrades are making a difference for her teams. Hear her insights to discover the potential impact on your practice.

NextGen Enterprise 8.4

Features:

- New, modern EHR & PM interfaces
- Fresh user experience
- PM UI refresh: Patient information bar, Toolbar icons, Document management viewer screens, and more
- Clinical AI desktop integration

“What specifically stood out for 8.4 is the schema change on both the EHR side and the PM. It’s just a **much sleeker, user-friendly interface.**”

“We really liked the configurable practice setting across our organization. We can set standards on information that we feel is valuable and that our different teams need to see in real time to give our patients the best experience. It just **fits into our staff’s workflow so seamlessly.**”

Why it matters: NextGen 8.4 delivers improvements you can experience today while laying the foundation for future web-delivered advancements in AI and intelligent automation.

NextGen Orthopedics Suite 2.0

Features:

- Expanded configurability
- Modernized templates & panels
- Robust single order template
- Specialty-specific note structures
- Optimized mobile ordering workflows

The single orders template brings all our order templates into one template where we can build quick picks for our specialized common visit types. With a couple clicks, you populate your orders, make changes, and select diagnoses, and that **submits all of your orders and generates all of your requisitions.** I think it’s going to be a huge game changer for our support staff.”

“The new provider template is **customizable from provider to provider**. We can set their preferences to go in, make a couple clicks, populate their information, and make changes based on the specific patient that they’re treating, making it less cumbersome to go through each section to document a patient’s visit.”

“For our mobile providers, the new features allow them, with a couple clicks, to update the radiology orders. Before, in our 6.0 workflow, they had to go to the radiology template, get into the order, and find it. In the new upgrade, **it’s just right there** in their mobile section.”

Why it matters: The modern templates and workflow upgrades in Orthopedics Suite 2.0 improve documentation speed, accuracy, and flexibility for clinicians and practice staff.

Preparing for the next step

Upgrading and adopting new technologies is a big change. The right change management strategies drive proven success across teams.

- Communicate early with team members: Ensure everyone understands how this upgrade impacts and benefits them
- Gain buy-in across the entire organization: Give everyone a voice in decision-making
- Consider becoming an Early Adopter: Experience direct access to the NextGen product team

“The clear communication with our staff, the early buy-in, setting up regular check-ins, not only internally, but also with the NextGen team, and getting early access to the testing environment has made a **huge difference**.”

“The client success team has been the best part of early adoption. I could not have asked for a better project team. It’s just been **such a seamless process**, and I wish every implementation was like this. I feel very spoiled right now.”
